Research publications using Cambridge's Laser ablation ICP-MS Leading Light Laboratory facilities

The ICP-MS laboratory has a long-established track record of supporting collaborative, interdisciplinary research across the University of Cambridge and beyond. Working closely with users, including researchers funded by EPSRC, NERC, ERC and MRC, the facility continually develops new analytical methods and protocols to improve data quality and expand capability. This has enabled research spanning Earth sciences, ice-core records, catalysts, nuclear materials, semiconductor technologies, nanoparticles, metallurgical artefacts, artificial photosynthesis, environmental science, plant biology and cellular metabolism. Click here to see a list of scientific publications performed using our facilities.
